

THIS ISN'T THE **TIME TO QUESTION RELIABILITY**

DEMONSTRATE YOUR COMMITMENT TO **QUALITY** IN THE **AEROSPACE INDUSTRY**

Planned, effective management is essential if organisations wish to prosper in such a high-profile industry. Systematic management at all levels ensures organisations meet the expectations of their suppliers and customers by delivering consistently excellent products and services.

SGS

QUALITY MANAGEMENT SYSTEMS IN THE **AEROSPACE INDUSTRY**

Quality Management Systems (QMS) have been used in the aerospace industry for a number of years. The AS/EN 9100, 9110, 9120 series of standards are used and supported by the world's leading aerospace companies and throughout their supply chain partnerships.

In fact, many organisations wish to go still further and are already integrating the management of all of their systems. Quality, Environment, Health and Safety and Technical issues are now coming together as never before.

SGS United Kingdom Ltd offers organisations in the aerospace industry a full auditing service, and works closely with them to achieve the key certifications they need: AS/EN 9100; ISO 9001; OHSAS 18001; ISO 14001.

AS/EN 9100

AS/EN 9100 supplements ISO 9001 and is a set of standards developed by the International Aerospace Quality Group (IAQG). The standard addresses the stringent regulatory, safety and reliability requirements of the aerospace industry, from commercial aviation to defence and builds confidence throughout the supply chain.

THE BENEFITS OF AS/EN 9100

- An immediate boost to credibility amongst suppliers and customers.
- Exposure to new business by being added to the Online Aerospace Supplier Information System (OASIS) database.
- An effective entry-to-market tool.
- Improved market performance.
- A more confident, responsive and motivated workforce.
- Improved workforce productivity.
- Improved internal operations to meet customer requirements.
- A reduction in the costs caused by multiple second and third audits.

ISO 9001

ISO 9001 improves an organisation's product and service quality, gives customers confidence that their needs will be met and standardises an organisation's business by giving it a consistent approach to its operations. In addition, it improves work processes, efficiencies and staff morale, and reduces waste.

In short, gaining registration to ISO 9001 will help your organisation grow. Whether you are looking to expand globally or locally, ISO 9001 demonstrates your commitment.

SGS HELPS YOU BUILD AN INTEGRATED MANAGEMENT SYSTEM

ISO 9001 is designed to be compatible with other management systems standards and specifications such as OHSAS 18001 (Health and Safety) and ISO 14001 (Environment).

SGS Training Services offers training to help you implement and audit an integrated management system, as well as high-level programmes looking at the way in which companies can use these systems to achieve excellence.

OHSAS 18001

OHSAS 18001 is an internationally recognised standard created to enable organisations to seamlessly integrate their existing occupational health and safety management procedures.

THE BENEFITS OF OHSAS 18001

- Increased staff motivation.
- Reduced operating costs.
- Potential reductions in the cost of insurance premiums over time.
- Reduced accident costs.
- Reduced risk of incidents causing unwanted publicity and prosecution.
- A public demonstration of due diligence.
- Enhanced corporate image.

SGS provides full training to help anyone develop their skills and knowledge in safety management systems. In-company training, designed to meet an organisation's specific requirements complements a national programme of training.
